
Galois Representations In Arithmetic Algebraic Geometry

galois representations - ias school of mathematics - galois representations r. taylor* abstract in the first part of this paper we try to explain to a general mathematical audience some of the remarkable web of conjectures linking representations of galois groups with algebraic geometry, complex analysis and discrete sub-groups of lie groups. in the second part we briefly review some limited ... **w h a t i s . . . a galois representation?** - w h a t i s . . . a galois representation? mark kisin let q be the field of algebraic numbers. the galois group g q ... $gal-q=q$ is the group of automorphisms of the field q : a galois representation is simply a representation of this group, or indeed of **galois representations - mathematics research unit** - amplex (e.g. cyclotomic character, galois representations attached to elliptic curves, abelian varieties and modular forms) and introduce l -functions. • the next chapter is on general representation theory. among other things, the brauer-nesbitt theorem is proved and fields of definition of galois representations are discussed. **galois representations - math.bu** - k the absolute galois group of k , i.e. the galois group of a separable closure of g . let kbe a topological eld. a representation of g k over kis called a galois representation. if kis a global eld (e.g. a number eld), then a representation of g k is called a global galois representation. if kis a local eld, then we speak of a local galois ... **galois representations - university of warwick** - galois representations 1 introduction (vladimir) 1.1 galois representations galois representations really mean representations of galois groups. definition 1.1. an artin representation, ρ , over a eld k is a finite dimensional complex representation of $gal(k=\bar{k})$ which factors through a finite quotient (by an open subgroup). **galois representations and automorphic forms** - galois representations the galois group g is profinite and is compact for a totally disconnected topology. one side of the correspondence consists in continuous representations $\rho : g \rightarrow gl(n, r)$ r an algebraically closed field (e.g. \mathbb{C} , or \mathbb{F} **the conjectural connections between representations arxiv ...** - the conjectural connections between automorphic representations and galois representations kevin buzzard and toby gee abstract. we state conjectures on the relationships between automorphic representations and galois representations, and give evidence for them. contents 1. introduction. 1 2. l -groups and local definitions. 4 3. **a note on galois representations with big image** - a note on galois representations with big image 3 it is a pleasure to thank peter sarnak and laurent clozel, who awakened in 2001, respectively reawakened in 2016, my interest in this ques- **even galois representations and the fontaine-mazur conjecture** - even galois representations and the fontaine-mazur conjecture 3 the idea behind this theorem is simple: it suffices to show that ρ is potentially modular over some totally real field. since modular representations **automorphic galois representations and the cohomology of ...** - representations have been constructed, either directly or by p -adic interpolation, using the cohomology of shimura varieties. this source of galois representations has been or soon will be exhausted, and new methods will need to be invented in order to find the galois representations attached to automorphic representations **torsion points and galois representations on cm elliptic ...** - torsion points and galois representations on cm elliptic curves 3 corollary 1.2. for any o -cm elliptic curve $e = k(j(e))$, the reduced mod n galois representation $\hat{\rho} : g_k(j(e)) \rightarrow gl(n, o)$ is surjective. corollary 1.3.
